

VillageFax® Fax to E-Mail

VillageFax provides inbound electronic delivery services to enterprises in need of more cost-effective and efficient ways of receiving and processing business information. Fax-to-Email enables enterprise clients to receive documents in digital format, conforming to the specific requirements of their corporate environment and messaging infrastructure.

- Users receive fax transmissions directly into their email inbox where they may be sent or delivered to enterprise workflow applications for processing.
- Once received, document can be stored in their digital format, printed, forwarded, annotated with popular desktop software, sent to fax machines, or processed in any manner to meet your workflow demands.

Intelligent Dynamic Information Delivery...Enterprise Class Performance

VillageFax's Electronic Delivery service can also support the automation requirements of your ERP, Customer Relationship Management systems, and business critical application environments.

- Through VillageFax's industry leading integration capabilities we can capture information from any predefined output format...from standard interfaces, data streams (API, Print, Spool, Control File etc.) or directly from the actual document.
- VillageFax capabilities also include the creation of business form content and distribution of transactional documents and reports such as invoices, purchase orders, sales orders and financial statements. Whatever your automation and secure distribution needs, VillageFax offers clients immediate value, seamless integration and exceptional reliability.

Security

Applications may receive fax transmissions through an optional private and Secure POP Access Point in the VillageFax service center. Received messages are stored in the Secure Access Point in real-time, and may be retrieved in batches by request or by automating delivery directly to your email server or client. Messages can be secured with Secure Socket Layer (SSL) encryption, using secure SMTP or secure POP. VillageFax POWER Delivery also supports HTTP protocol functionality, delivering fax transactions directly to your application as an alternative to the automated SMTP or POP methods. This transmission process can also be secured using SSL via HTTPS.

VillageFax Delivery Service

Key Benefits:

- Callers will never get a busy when trying to send you a fax.
- Improved process for documents received via fax. Store them digitally, forward, annotate, or delete.
- Improve document management and control of faxes. Storing the digital image eliminates the need for accumulation and storage of paper documents.
- Individual users receive fax messages in the privacy of the email inbox, with optional encryption.
- Department or group administrators can have immediate access to a fax and forward it to the appropriate individual with the speed, quality, and security of the enterprise email system.
