- Retail

Questys® Solutions Product Lineup Fast, Easy, Cost Effective

Our suite of award-winning document management solutions are designed to enhance office productivity and provide content and records management to clients in the private industry and government agencies. Easily scalable to meet the needs of today's SMBs and enterprises, this complete lineup is built exclusively for paper-intensive organizations.

Questys Enterprise Base Server

Designed for enterprise organizations and government agencies, you can scan paper documents, import electronic files and email, then OCR, edit, and store your information in electronic format for instant retrieval.

Questys Pro Base Server

Designed specifically for SMBs, you can easily scan, organize, protect and instantly retrieve information electronically on a stand alone system or networked environment.

Questys WorkStream

Flow work electronically from inbox to inbox until project completion promoting responsibility, accountability, and increased productivity. Greatly increase your business processes with WorkStream by maximizing the efficiency of your workforce.

Questys LegisStream

Automate your entire agenda process, LegisStream is the solution to your agenda development and management needs.

Questys Granicus Integration

Enhance your Questys LegisStream module with one-click integration of Granicus MinutesMaker™ a for a powerful combination of agenda management tools, enriched with streaming video.

Questys Royalty-Free Searchable CD

Copy and export any portion of your Questys Database to a searchable CD.

Questys Web

Provides fast, secure and reliable Web access to users around the world.

Questys DigiSign Electronic Signature

Create and edit any images or stamps, seals and signatures and apply them electronically.

Questys eCopy® Connector

Simplifies input to Questys Solutions by linking an eCopy scan station, equipped with multifunction products and copiers, directly to your Questys Solutions system via a simple wizard-based interface.

Questys Capture

Affordable data entry automation and indexing that easily integrates into Questys or other applications. Questys Capture includes zonal OCR, barcode recognition, text parsing, and much more.

Questys AppLink

Integrates your Questys document management system with compatible third-party software applications, permitting document searches and automatic indexing from within the application.

About Questys Solutions

Founded in 1980, Questys Solutions is headquartered in Mission Viejo, Calif., and offers the IT industry's most robust lineup of affordably priced document management solutions. The company designs professional document management software solutions that meet the varying needs and budgets of today's SMBs and enterprise organizations.

Questys® Enterprise Base Server

Instant file retrieval at the touch of a button. Imagine every file for your entire agency at your fingertips.

Let Questys Do It All For You

Questys document imaging system can scan paper documents, import electronic files and email, then OCR, edit, and store your information in electronic format. You can then create, search and retrieve everything from your desk, from across town, or from the other side of the world via Questys Web Server. Outputting what you found is easy, too: Just print, fax, email or export information in just a couple of clicks.

Time is Money and Questys Saves You Both

The speed of search, one of the most important factors in any ECM system, is the hallmark of Questys. In virtually all cases, the system will locate a unique search term in less than one second regardless of database size! Compare that to waiting 30 seconds, 5 minutes, 20 minutes...or more!

Get Customized with Questys' Add-on Modules

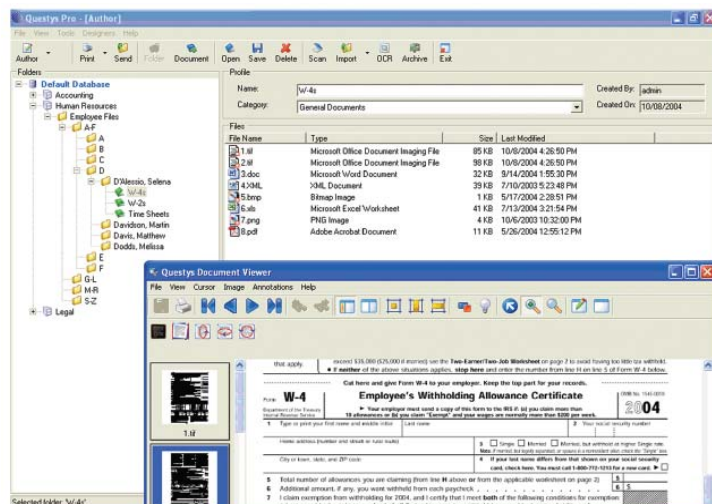

Questys' feature-rich capabilities can be further expanded with add-on modules such as Questys Capture, Questys AppLink, Questys LegisStream, Questys WorkStream, Questys Searchable CD, Questys Web, Questys Granicus Integration, Questys DigiSign and Questys Microsoft Integration.

Feel at Ease with the Familiar Look and Feel of Questys

Questys looks and feels like a Microsoft application so the training and application of Questys into your agency can be a quick and simple process.

"We were very impressed with Questys' friendly, flexible and down-to-earth approach to document management. Questys' 'can-do' attitude and willingness to customize the solution to meet our individual requirements was a key element in our decision making process."

Michele Baird, Clerk of the Board and Records Manager, Mojave Desert Air Quality Management District

The Bottom Line

Questys is imaging. Questys is Records Management. Questys is Document Management. And OCR, too! So much power packed into one streamlined product. Why wait? Grab hold of your information now!

 www.questyssolutions.com

Each organization is unique with regard to its records, work processes, and paper flow. Sometimes off-the-shelf products alone cannot provide the answers to the complex problem of records processing and management. What is required is a custom solution like Questys Pro and its add-on modules to create a perfect digital document storage environment for your business.

Questys® Pro Base Server

Instant file retrieval at the touch of a button. Imagine every file for your entire business at your fingertips.

Let Questys Pro Do It All For You

Questys Pro document imaging system can scan paper documents, import electronic files and email, then OCR, edit, and store your information in electronic format. You can then search and retrieve everything from your desk, from across town, or from the other side of the world via Questys Web Server. Outputting what you found is easy, too: Just print, fax, email or export information in just a couple of clicks.

Questys WorkStream module streamlines your organization with electronic workflow and approval routing capability.

Simplifying the process of bringing tasks, employees and records together, Questys WorkStream module is your way of streamlining to greater efficiency.

Questys® WorkStream

Streamlining the flow of tasks...one inbox at a time. Gone are the days of copying a file, and putting it in an inbox for approval. And into the next inbox for the next task. And to the next...

Questys WorkStream provides for work to be flowed from inbox to inbox until project completion promoting responsibility, accountability, and increased productivity. It can greatly increase your business processes by maximizing the efficiency of your workforce.

You Define It, WorkStream Creates It

The Questys WorkStream module includes a full complement of business process re-engineering, workflow process definition and workflow management capabilities. It facilitates the definition of workflow templates for different projects, initiation of projects, resource allocation, status monitoring and control. All templates are user defined, if you can define it, WorkStream can track it.

WorkStream Streamlines Your Business Processes by:

- Speeding up day to day task flow while increasing project control.
- Maximizing resources while flexibly balancing workload for staff.
- Promoting consistency, efficiency and accountability in staff.
- Reducing project time and cost.

Don't Let Anything Slip Through the Cracks

Questys WorkStream module provides your organization with all the tools necessary to make sure nothing slips through the cracks. At any moment, project managers can view the overall status of all projects currently underway, a task by task status of a single project, or even the workload of a specific individual. What's more, Questys WorkStream provides for full accountability in any work process. For instance, if you need to discover who approved payment of a certain invoice that is over three years old or need to find out who reviewed a contract that was executed decades ago, simply pull up the project in Questys Pro Base Server and view the workflow history, along with the actual documents.

The Bottom Line

The Questys WorkStream Module is the tool that will help your operation become more efficient while cutting your operational costs.

“LegisStream has improved our agenda preparation considerably. What normally took over a week is now down to a two day process! The agenda process is virtually automatic...[We] have moved light years ahead...”

Lydia Beiswanger
California Clerk of the Board
Merced County

Questys® LegisStream

LegisStream will automate your entire agenda process, from creation of staff reports, agendas and packets to real-time roll-call, vote tabulation and meeting minutes, from archiving agendas and backup material to searching and retrieving by keywords, agenda item titles and full-text, both via LAN or Internet, LegisStream is the solution to your agenda development and management needs.

Agenda Creation and Internet Publishing Made Simple

Questys LegisStream module creates agenda items and staff reports for review, submittal, approval and inclusion on the final agenda. You can also auto-generate the agenda, in your format, simply, quickly and effortlessly; and when your agenda is complete, post your agenda packet on the Web with LegisStream's Internet Publishing feature.

Keep Up with a Constantly Changing Environment with Ease

The LegisStream module gives you the flexibility to keep up with a fast-moving, constantly changing environment with the ability to add, move, defer, sort and delete agenda items with a couple of easy mouse clicks.

Increase Efficiency in Your Internal Processes

LegisStream helps you do even more with its additional features:

- LegisStream's Legislator feature records elected officials notes effortlessly.
- LegisStream's Clerk feature records real-time meeting minutes and vote tabulations, as well as, auto-generates the minutes immediately following the meeting.
- LegisStream's Roll-Call feature supports real-time attendance accounting.
- Integrate with Granicus MinutesMaker by including the Questys Granicus Integration module with your Questys Enterprise LegisStream system.

The Bottom Line

The Questys LegisStream Electronic Agenda system streamlines the legislative agenda process. What was once an arduous task of manually compiling paper and data into an Agenda Packet is now made quicker and easier with LegisStream.

Questys® Granicus Integration

Automate, extend and accelerate your legislative process with agenda management and interactive streaming capability.

Expand your Questys LegisStream agenda management module with Granicus MinutesMaker:

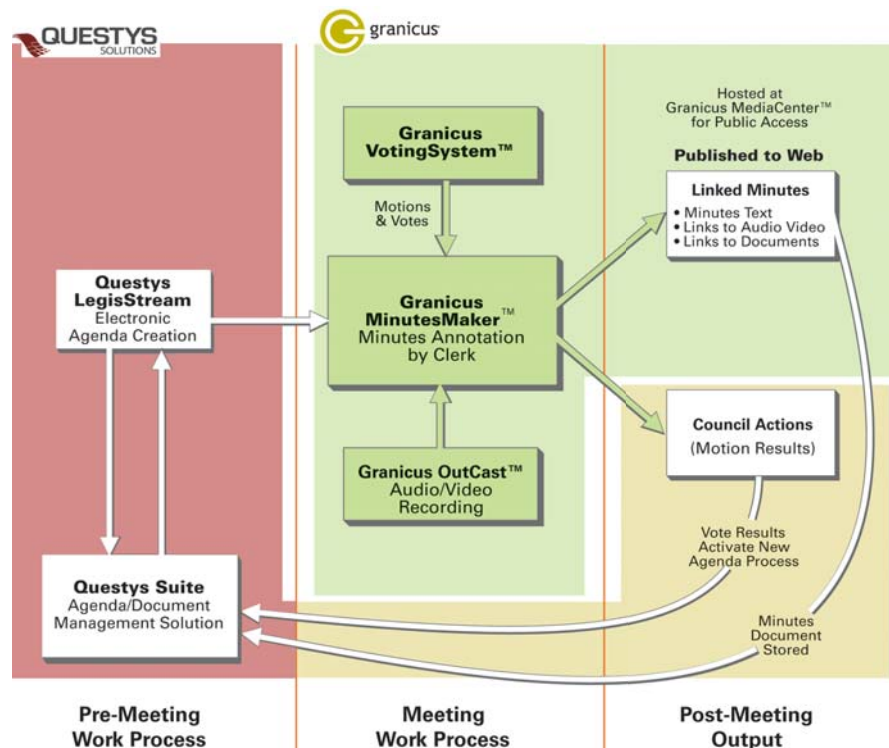

- Manage all stages of the legislative process.
- Quickly export all agenda items and related documents from Questys LegisStream into Granicus Live Manager.
- View LegisStream agenda and supporting documents directly from your Granicus integrated web interface.
- Keyword search of streaming video, agendas and minutes just like “Google”.
- Import meeting actions with audio/video links back into LegisStream for permanent historical records and archive.

Optimize Your Agenda Management Workflow Process

Enhance your Questys LegisStream™ Electronic Agenda Management module with one-click integration of Granicus MinutesMaker™ for a powerful combination of agenda management tools, enriched with streaming video. Granicus integration solution leverages your communication tool set and effectively manages the legislative process: pre-meeting activities such as agenda creation; meeting activities including minutes annotation; and post-meeting activities such as minutes preparation and distribution.

Fully Integrate Your Agenda Process

Questys LegisStream Electronic Agenda fully automates the agenda creation process with innovative agenda management tools and archiving capability. Granicus MinutesMaker delivers the infrastructure and live meeting management tools to capture, store, and distribute recordings of all public events for convenient live and on-demand viewing over the Web. The two combined create an integrated public record available 24/7 for live or on-demand access through your website. This record includes keyword searchable archives, interactive meeting agendas and minutes linked to audio/video recording indexes, supporting documents, and global distribution capability with quick and easy publishing to your website and the Granicus MediaCenter™.

Questys Solutions
 877-362-6246
 governmentsales@questys.com
 www.questyssolutions.com

The Bottom Line

Together Granicus MinutesMaker and Questys LegisStream, maximize productivity and deliver real-time results by creating a paperless workflow, instantaneously configuring event and agenda data, while streamlining the workflows of your public meetings.

Questys® Royalty-Free Searchable CD

Now small and midsize businesses (SMBs) can create searchable CDs from data stored in the Questys Pro database without paying royalty fees. In addition, CDs created do not require the install of applications to the users' desktop, making this a truly stand-alone solution.

Share Data Quickly

With the Questys Searchable CD Module, users can effortlessly export any portion of their database to a searchable CD. Employing advanced technology, this powerful module simplifies the process for service bureaus and other professional organization by making data easily accessible and transferable.

Superior Customer Support

Using the Questys Searchable CD Module, SMBs can improve their customer satisfaction quotient. Whether delivering data in a searchable format or simply archiving information for security purposes, Questys Searchable CD Module empowers SMBs to provide superior service without incurring unnecessary fees or using additional resources.

Rapid Search and Retrieval

Questys Searchable CD Module expands the capabilities of Questys Solutions Document Management software by allowing users to copy specific data from the Questys Database to a searchable CD from any Questys scan station. Designed specifically to enable SMBs to make computer-generated records portable, this intuitive module requires no additional hardware.

The Bottom Line

By using the Questys Searchable CD Module, anyone with a PC can take advantage of the search and retrieval power offered by Questys Document Management software. Furthermore, because Questys doesn't charge royalties for each CD created, SMBs save time and money with this powerful add-on module.

Questys Searchable CD Module provides true portability with minimal effort.

Common uses include:

- Creating year-end backup copies of client files.
- Exporting case files for use in court.
- Copying select records to send to another organization.
- Scanning client documents to a searchable CD they can use as needed.
- Create client or time specific backups for storage.

**THE POSSIBILITIES
ARE ENDLESS**

Questys Web module gives you Web access to the full feature set offered by your Questys Document Management software.

This cost effective module enables you to use the power of the Internet and/or Intranet to access vital data from virtually anywhere.

Questys® Web

Questys Enterprise Web Server provides users with a virtual office that can be reached from any location in the world. Using a standard internet browser, Questys Web provides for document generation, scanning, authoring, and search & retrieval. Whether you are on the road or simply working in a satellite office, Questys Web empowers users to stay connected and access documents remotely.

Create and Access Data from Anywhere

Questys Web provides you secure access to your documents from anywhere in the world via the Internet or Intranet. Web gives you all the document creation, search and retrieval capabilities as the Questys Enterprise Base Server. With Web, users can manage documents from virtually anywhere.

Create, Browse, Search, and Print with Ease

Questys Web Module expands the value of content management by providing access to documents via Internet or Intranet. Personnel using this module can create, browse, search and retrieve documents as if they were on site, all from within the Web interface; and public may research documents made available to them over the Internet saving your employees time with public records requests.

Improve Communication and Collaboration

Authorized users enjoy simultaneous access to documents captured by the Questys Document Management software. The results include:

- Increased user collaboration and real-time access to documents 24/7.
- Create and upload documents to remote locations.
- Keyword and full-text searching capabilities.
- All features fully controlled by Questys Security.
- Participate in workflow processes created by the Questys WorkStream module.
- Participate in agenda item submission for meeting agendas created by the Questys LegisStream module.

The Bottom Line

The Questys Web Module allows authorized users to create, file, archive and retrieve documents stored on the Questys database from anywhere at anytime. This intuitive web-based module offers enterprise-level functionality and helps improve productivity and service while maintaining cost effectiveness.

Questys DigiSign module enables organizations to exchange documents electronically with:

- Assurance that the information has not been altered since it was sent
- Verification of the signer's digital identity

Questys® DigiSign

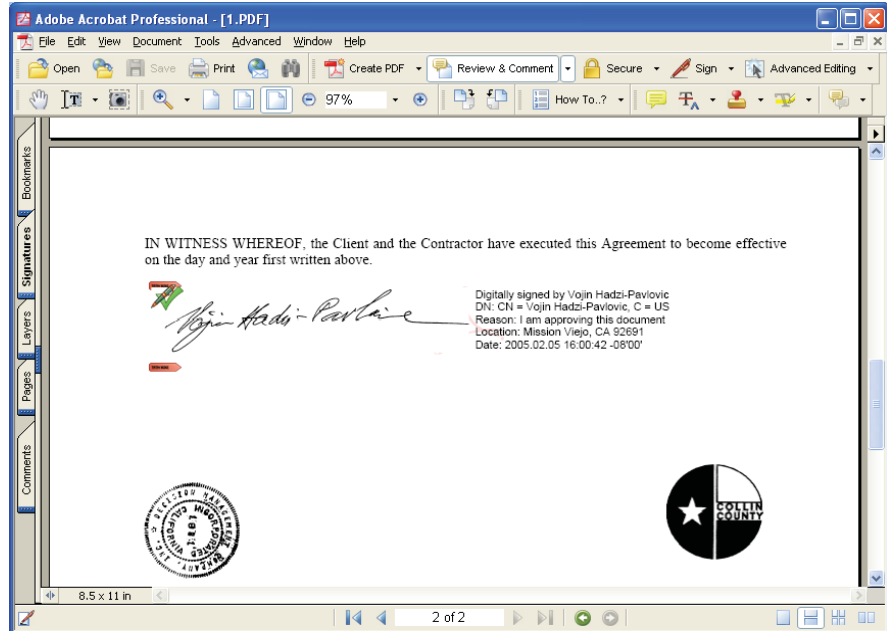

Any document that requires a signature, agency seal or stamp can be effortlessly authorized and verified with Questys DigiSign.

Create Workflow Efficiencies with DigiSign

Questys DigiSign module generates and edits images of stamps, seals and signatures that need to be included on an organization's official documents. DigiSign can digitally sign a document with a unique and secure signature, stamp or seal. Once the unique signature or stamp is created, it's easy to create a workflow process with Questys WorkStream module to route a document to a person's electronic inbox so it can be signed or stamped for verification and authenticity, increasing workflow efficiencies in your organization.

Get Secure with a Digital Signature

With Questys DigiSign, you are creating a digital signature that is an encrypted code. When this signature, stamp or seal is applied to a document, it is applied with this encryption code, creating a secure and reliable electronic signature for your documents. A digital signature serves two purposes, it uniquely identifies the individual or entity that signed the document and it assures the integrity of the document that was signed. Dependent on your organization's needs, signature certificates may be issued internally or by a national certification authority, such as VeriSign.

The Bottom Line

With Questys DigiSign module, a signature and its creation and verification processes provides the greatest possible assurance of both signer authenticity and document authenticity, with the least possible expenditure of resources.

Questys® eCopy Connector Module

The vast majority of businesses today have some form of a Multi Function Peripheral (MFP) in their office. You may know the MFP by its more common name...copier.

Questys eCopy Connector Module offers you many features and benefits:

- No longer run from your copier to your desk to add information to your Questys system.
- Deployable to all eCopy equipped MFPs throughout your organization. Send from all of your copiers to a single Questys database.
- Simple interface makes adding information to your Questys system a breeze.
- Train any user how to use the interface in a matter of minutes!
- Give everyone in your organization access to scan into your Questys system directly from the copier.

Stop the “Copier to Computer Run”

Today, nearly every copier manufacturer offers scanning capability with their devices. If you are looking at a document management solution for your business, you should definitely explore whether your existing scanning equipment can be used with the solution. Most copiers today have the ability to scan to file. This capability will let you scan your documents at the copier, then import them into your document management software. However, this process, in most cases, isn't as simple as it sounds. Imagine scanning 50 files at once then having to run back to your desk and manually index all of the information for each document you scanned. When you receive more files to scan, the process is repeated. Very quickly, you will find that you are running between your desk and copier an awful lot.

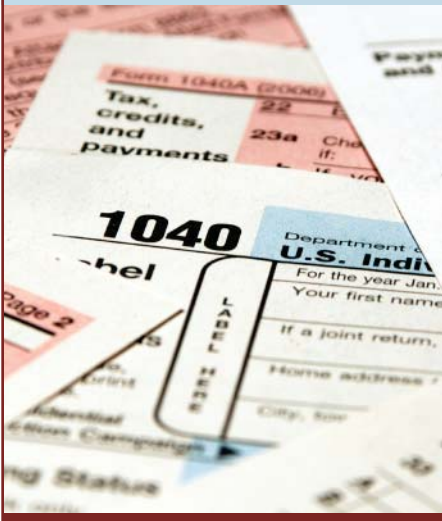

Enter the Questys eCopy Connector.

eCopy Partners with Questys Perfectly

Many copiers manufacturers have partnered with eCopy®, Inc. to integrate the eCopy ShareScan workstation with their copiers. The eCopy ShareScan workstation is a PC and small touch screen that hook up directly to the copier. Questys Solutions offers a user-friendly, wizard-based connector from the eCopy touch screen directly to your Questys Document Management System. You will now be able to scan *and* index your documents all in one place, making the “copier to computer run” all but disappear.

The Bottom Line

With the Questys eCopy Connector, you will be able to index and send documents directly from your copier to your Questys system. All this in an interface that anyone can learn to use in a matter of minutes!

Data entry for your document management system or any other application can be costly and time consuming. With Questys Capture, drastically reduce, or even eliminate, the manual data entry process associated with going electronic.

Questys® Capture

Any organization that uses computers performs data entry. Data entry is a time consuming, error prone, and costly process. Imagine a world where you could automate your data entry rather than manually inputting information into your document management system or accounting system. You could simply scan the pages that contain the data you need and magically the data is extracted.

Questys Does the Work for You

Questys Capture is a workstation-based data entry automation tool that will let you automate nearly any data entry process. Questys Capture uses advanced optical recognition technology to automatically extract important data from your scanned images. With Questys Capture you can use full page or zonal optical character recognition (OCR) to capture pertinent information. Questys Capture also recognizes many barcode types, regardless of where they appear on the page, as well as, being able to use it for handwriting and optical mark recognition. You can even capture data on unstructured documents. Questys Capture will intuitively recognize patterns of text in documents. With so many capabilities, Questys Capture can eliminate errors, time and cost that come with manual data entry.

Don't Just Speed Up Processes, Make Them Higher Quality

With Questys Capture, you can also send documents through a quality control process where a user can verify the extracted data, side-by-side with the images. Once Questys Capture has extracted the information you can output the data and/or images to your Questys Pro Document Management System, third party application, or simply package the files and data in a TIFF, PDF, or XML format and export.

Unlimited Scans, One Low Price

Automated data entry can save you mountains of time and money. Because of this, many providers of similar technology attempt to charge you for how much their products help you. For instance, if you process 1,000,000 pages per month the system costs 10 times the price than if you process only 5,000 pages per month. How does this make sense? With Questys Capture, you can process 1 to over 1,000,000 pages per month for the same low cost!

Questys Solutions
877-362-6246
info@questys.com
www.questys.com

Bottom Line

Stop devoting man-power, time, and money to manually entering your information and get automated with Questys Capture.

Questys AppLink makes it easy and affordable for businesses to integrate their Questys document management system with nearly any third-party software application.

Questys® AppLink

Designed to make input and access of electronic files fast and easy, Questys AppLink is an affordably priced, no-hassle module that quickly integrates your Questys document management system with third-party software applications.

With the ability to easily integrate software applications in a completely code-free environment, Questys AppLink minimizes the need for extensive software programming and user training.

By “linking” to nearly any third-party software application, Questys AppLink saves businesses valuable time and money. Now users can add, modify or retrieve existing documents from their Questys document management system repository without interrupting workflow, or having to exit or switch from one application to the next.

Real-Time Third-Party Software Integration

The sheer number of software applications being used for accounting, contact management, enterprise resource planning (ERP), and other line-of-business functions is daunting, and can quickly drain IT resources and slow productivity.

With Questys AppLink, companies can integrate their Questys document management system with virtually any third-party software application including Intuit QuickBooks®, Peachtree Complete Accounting®, Microsoft® Great Plains®, MAS 90®, Goldmine®, ACT!®, NetSuite®, Salesforce.com®, Microsoft Small Business Accounting, PeopleSoft®, SAP®, Oracle® eBusiness Suite®, and Calyx Point®. By accelerating software integration, Questys AppLink maximizes the performance and value of your Questys document management system. These productivity gains also enhance the user experience and help improve organizational efficiencies across the board.

Code-Free Application Integration

Engineered to save money and notably enhance system performance, Questys AppLink uses a GUI designer to speed integration and remove the complexity of programming. This timesaving functionality makes it easier and much more cost-effective for companies to use their Questys document management system with existing software applications. Questys AppLink’s intuitive, code-free design also enables businesses to quickly and accurately deploy, add and integrate future software applications into their Questys document management system.

Minimal User Training

Questys AppLink’s intelligent design virtually eliminates the need to train employees on how to use their Questys document management system with third-party software programs. Equipped with “hot keys” and “floating buttons,” this smart module gives users immediate access to their Questys document management system and makes it easier for users to generate, save, retrieve and edit files within existing software applications.

The Bottom Line

Questys AppLink removes the need for programmatic coding and speeds up the integration of Questys document management solutions with third-party software applications. This productivity module is ideal for vertical industries including healthcare, finance, legal, mortgage, accounting, and government where budgets are tight, yet numerous enterprise-level applications are required to remain compliant and keep business moving forward.
