

## Minimum System Requirements for Questys® LSx

### Server Requirements:

- Pentium compatible, 2GHz or faster CPU, dual core recommended
- Minimum 2GB; 4 GB recommended
- 512MB hard disk space, plus proportional space for data repository
- Windows 2003 Server or later, Windows XP SP2, Windows Vista Business or Ultimate
- Microsoft Word 2007
- .NET Framework 2.0
- .NET Framework 3.5 sp1
- Server 2003 or later
- Setup program automatically installs required software, except for the operating system, if not already present on the target machine
- Microsoft Office must be installed in order to pull text from Office documents.
- Adobe Acrobat Reader must be installed in order to pull text from Adobe documents.

### Setup prerequisites:

- Message Queuing & Internet Information Services (IIS) must be installed and enabled prior to starting setup
- Must have MS Office 2007 installed on Server
- SQL Server instance named QUESTYSX, with full-text service installed and enabled. If the default instance is not found, setup will automatically install new SQL Server 2005 Express with Advanced Services SP2 instance named QUESTYSX
- Ensure that the Distributed Transaction Coordinator service is configured for automatic startup and is started
- The user account running setup must have administrative privilege on the server

### LSx Email Notification Group:

- LSx will require configuration of a SMTP server
